2) Apply wax using the tip of the applicator. After applying wax turn applicator onto the side and use a figure 8 movement to spread wax evenly on the area to be waxed. This allows the wax to shrink wrap the hair.
3) Use the tip of the applicator to on the area that you have applied the wax to create a lip at the end of each strip. This allows you to have a tab to use when removing the wax.
4) Pull wax strip in the opposite direction of the hair growth pattern.
5) You will want to roll your wrist while pulling keeping as close to the skin as possible.
6) To help ease the discomfort for the client be sure to immediately cover the area waxed with your free hand.

© 2002-2019 Institute of Epidermal Cell Therapy and L. Saphonia Gee. All Rights Reserved.

3) Apply a pellon or muslin strip to the area to that you have just applied the strip of wax. To apply the strip you will use a sliding pressure in the same direction of the hair growth pattern.
4) Fold end of pellon or muslin strip to make a tab for pulling. Hold skin around area to waxed firm and tight. When removing strip you will want to pull in the direction opposite of the hair growth pattern. Be sure to roll the wrist as you remove the strip while staying as close to the skin as possible. To help ease the discomfort for the client be sure to immediately cover the area waxed with your free hand.
