

Skin Project Guidelines

When preparing your project take the time to study the skin and understand each of its components. This will make your project a valuable tool in learning the mechanics of the skin and its function. It is suggested that you research the subject matter and not limit yourself to the information that is listed on the handout. You will be presenting your project and report to your classmates. You will want to do your best. Best of luck and have fun!

- Please refer to the handout for a breakdown and explanation of the skin components that need to be included in your project.
- Please do not use any food items to prepare your project. We do not allow cooked items to share with the class nor do we allow dried food items to be used.

Your project must have a written report to use for your presentation and an explanation of the skin components and their function. Using the skin diagram in lesson Week 3 write a 500 word essay in describing all the components of the skin. Do not copy and paste. Site your source from a scientific study website.

- Upload to your school computer and also e mail essay to instructor deborahwaters@estheticstherapy.com. Your project and report are due on a week from assigned date. Both must be completed and turned in on original due date in order to get credit.
