- Touch receptors is tactile sensations = nerve cells which communicates with your brain. Touch receptors are divided into two groups:
 - ✓ Mechanoreceptors - communicate perceive sensations of pushing, pulling or movement, pressure, vibrations, and texture.
 - ✓ Thermoreceptors - communicate perceive sensations of temperature

31. Cutaneous Receptors found within the skin responds

- ✓ Chemoreceptors/Chemical action = communicate perceive sensations stimulated by changes in the chemical concentration of substances.
- ✓ Nociceptors receptors/Pain = communicate perceive sensations stimulated by tissue damage.
- ✓ Thermoreceptors/Temperature = communicate perceive sensations stimulated by changes in temperature.
- ✓ Mechanoreceptors/Movement active = communicate perceive sensations stimulated by changes in pressure or movement.
- ✓ Photoreceptors/ Light = communicate perceive sensations stimulated by light energy.

32. Know the structure and function of the skin nerve receptors

- **Meissner's** – located dermis layers glabrous skin -senses touch receptors Vibration 20-40 Hz range
- **Krause Corpuscle** – located (mucocutaneous) lips, tongue, and genitals cold receptor - pressure
- **Pacinian Corpuscle** – located lower layers dermis hairy and (glabrous) skin without hair senses pressure receptors Vibration 150 - 300 Hz range
- **Ruffini Corpuscle** – located dermis layers hairy and (glabrous) skin without hair senses warmth receptors
- **Thermo Receptor** – sense heat or cold

Remember you are on the eyebrow bone

Safety Tips: First Kit remains on station. Always use bracing technique when working around the eyes & mouth

- Sanitize hands
- Dip dry gauze into antiseptic on pallet
- Use bracing technique hand over thumb while performing antiseptic application on eyebrow
- **Begin Cleanse with antiseptic product to destroy and prevent disease causing microorganisms aka pathogens**
- Begin rub the antiseptic over entire right eyebrow area (i.e. except in eyes, nostrils/nose, mouth, and ears)
- Use dry gauze to pad dry antiseptic product residue around the eyebrow area
- **Begin tweezing of hair direction of the hair growth (right to left)**
- Remember hold the skin taut while tweezing, stretch the skin taut with the index finger and thumb Wrap dry gauze on middle finger of free hand
- Use bracing technique hand over thumb while performing eyebrow tweezing
- Each time you tweeze a hair follicle place it onto your gauze wrapped finger
- Start tweezer at the base of eyebrow (located between the inner corner of the eyebrow and root of the nose)
- Place tweezer parallel on skin at the base of the follicle and gentle slide hair follicle with a steady, smooth motion in out of the follicle opening in the direction of the hair growth (right to left).
- **Begin Post Care with antiseptic product to destroy and prevent disease causing microorganisms aka pathogens**
- Begin rub the antiseptic over entire right eyebrow area (i.e. except in eyes, nostrils/nose, mouth, and ears)

Onsite Procedures - 25A & 25B

- **Telogen Stage – Resting Phase**
Time last: - 2 to 4 months
Action: stop growing; dermal papilla separates from the hair follicle
- Shedding Phase –**
Time last: - 3 months
Action: Hair follicle fall out and starts the grow again
- 187. **Prep Area for skin for Waxing Services**
 - ✓ **Degrease** – remove surface oil and bacteria
- 188. **Prep Area for hair Waxing Services**
 - ✓ **Dry Brush** – loose hair form the skin surface
 - ✓ **Skin Issues – Ingrown Hairs**
 - Extrafollicular – hair grows back into skin surface
 - Transfollicular – hair trapped under skin surface
- 189. **Apply skin protectant product**
 - ✓ **Cornstarch powder** – help absorb the oil and moisture on the skin surfaces
 - ✓ **Oil** – create a film like layer on the skin surface
- 190. **Perform Waxing Skill Procedure** - temporarily remove unwanted hair.
- 191. **Apply Wax**
 - ✓ **Upper Lip use soft/hard wax**
 - ✓ **Eyebrows use soft/hard wax**
 - ✓ **Underarms use soft/hard wax**
 - ✓ **Arms use soft/hard wax**
- 192. **Hard Wax Application Skill Procedure**
 - 1) Load applicator with wax by dipping the applicator into the wax pot. You want to have the majority of your wax on the tip of the applicator. Use edge of the wax pot to scrape the excess wax from the back and sides of the applicator.
 - 2) Apply wax using the tip of the applicator. After applying wax turn applicator onto the side and use a figure 8 movement to spread wax evenly on the area to be waxed. This allows the wax to shrink wrap the hair.
 - 3) Use the tip of the applicator to on the area that you have applied the wax to create a lip at the end of each strip. This allows you to have a tab to use when removing the wax.
 - 4) Pull wax strip in the opposite direction of the hair growth pattern.
 - 5) You will want to roll your wrist while pulling keeping as close to the skin as possible.
 - 6) To help ease the discomfort for the client be sure to immediately cover the area waxed with your free hand.
- 193. **Follow Post Waxing skill Procedure**

194. Soft Wax application

- 1) Load applicator with wax by dipping the applicator into the wax pot. You want to have the majority of your wax on the tip of applicator not the back or dripping from the sides.
- 2) Apply wax at a 45 degree angle, slowly spreading wax while holding skin tight. You will want the wax to slowly roll off the applicator for a more even spread. Be sure that you apply wax in the same direction of the hair growth pattern.
- 3) Apply a pella or muslin strip to the area to that you have just applied the strip of wax. To apply the strip you will use a sliding pressure in the same direction of the hair growth pattern.
- 4) Fold end of pella or muslin strip to make a tab for pulling. Hold skin around area to waxed firm and tight. When removing strip you will want to pull in the direction opposite of the hair growth pattern. Be sure to roll the wrist as you remove the strip while staying as close to the skin as possible. To help ease the discomfort for the client be sure to immediately cover the area waxed with your free hand.
- 5) When using soft wax you do not apply the wax to the same area more than once. You may follow the procedure for hard wax removal to clean up the miscellaneous hairs that did not adhere to the strip
